

# \$0 to insulate your home? It's easy with ecovantage.

Do you know that by insulating your home, your electricity bills may be **reduced by up to 40%\***? Not only will you save money - your house will be cosier in winter and cooler in summer.

**And it's easier on the environment.**

## How can my insulation be free?

The Australian Government is doing its bit to help the environment and the economy with the Energy Efficient Homes Package. Up to \$1600 in insulation rebates is available for homeowners and property landlords through the package.

## Will the insulation always cost me \$0?

Let's look at some examples:

### Example 1: Owner Occupier

Insulation cost = \$1600

Homeowner Rebate = \$1600

**Your outlay = \$0**

### Example 2: Property Landlord

Insulation cost = \$1600

Property Landlord Rebate = \$1000

**Your outlay = \$600**

## How do I know if I am eligible?

If you are a homeowner or property landlord and have no or limited insulation in your ceilings, you are eligible. If your home is up to 200 square metres in area, has easy ceiling access and no special requirements, it is likely that your insulation will cost \$0 after your rebate!

## What does ecovantage do?

**ecovantage** helps you save money and makes your home more energy efficient by installing your insulation and helping you to navigate your way through the rebate process. We are an environmental consultancy dedicated to helping people and businesses become active in the fight against climate change.

## Can ecovantage help me save even more money and make my home more energy efficient?

**Yes.** We will work out whether you are also eligible for extra discounts or rebates through various state energy efficiency programs that **ecovantage** delivers. These programs involve energy and water saving activities such as energy efficient light globe replacement and water saving showerhead exchange.

# Save \$300 to \$700\* in electricity costs per year with solar!

Do you know that electric powered hot water usage comprises between 20 – 30%\* of your total energy bill? **You can save up to 90%** of that energy by simply harnessing the sun to naturally provide you with hot water.

## What are some of the water heating packages available to me?

The Australian Government's Energy Efficient Homes Package offers homeowners and property landlords the chance to claim up to \$1600 in rebates if you upgrade to a solar or heat pump hot water system. This offer is available only if you have not taken advantage of the \$1600 insulation rebate offer. This means that your installation cost may be as little as \$950!

## How can ecovantage help?

Should you choose to take advantage of the Energy Efficient Homes Package solar or heat pump hot water system rebate offer, **ecovantage** will install your new hot water system for you.

If you choose to take up the insulation rebate offer and therefore not eligible to apply for the solar or heat pump hot water system rebate, **ecovantage** will work out the most cost effective way for you to enjoy the benefit of having both in your home. Significant incentives are also available if you choose to change your heating to energy efficient natural gas space heating. Prices are available on request.

We will also determine whether you are eligible for extra discounts or rebates through various state energy efficiency programs that **ecovantage** delivers.

These programs involve energy and water saving activities such as energy efficient light globe replacement and water saving showerhead exchange.
